

Speed up innovation for next-generation batteries with the power of cloud-based product lifecycle management (PLM) software

The shift towards electrification

Rising sustainability concerns and the accelerated adoption of electric transportation by consumers means that by 2030 the battery industry will transform

Manufacturers need more capacity to create at scale and meet current demands. Without a proper solution they may suffer from:

- Inability to deliver promptly and on time
- Sluggish and expensive battery development
- Scale-up issues with escalating scrap rate, quality issues and energy usage
- Noncompliance to regulatory mandates and sustainability targets

PLM Solutions

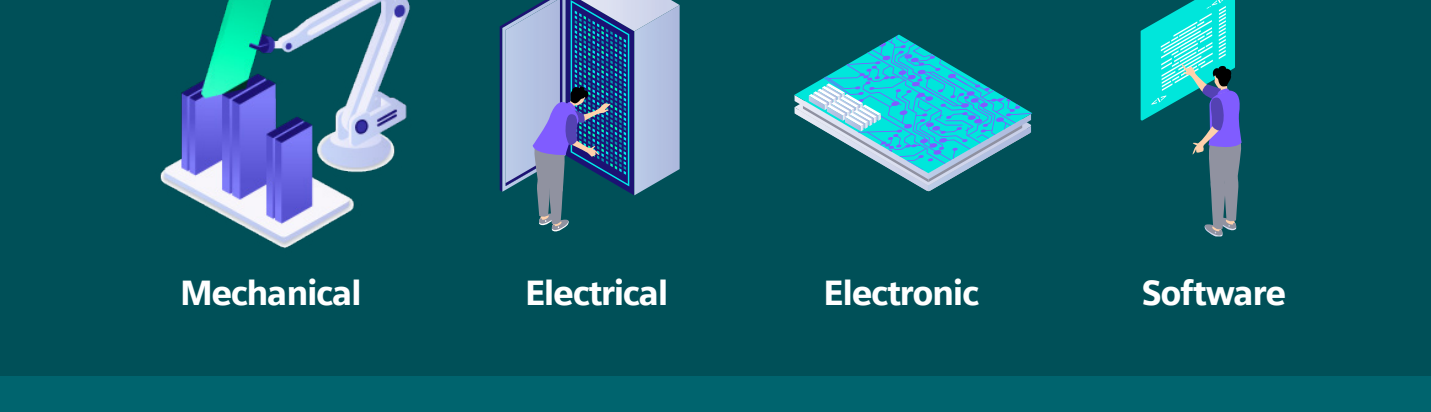

Product lifecycle management (PLM) software offers battery machine builders real-time visibility into project progress while breaking down silos and synchronizing systems.

Why PLM?

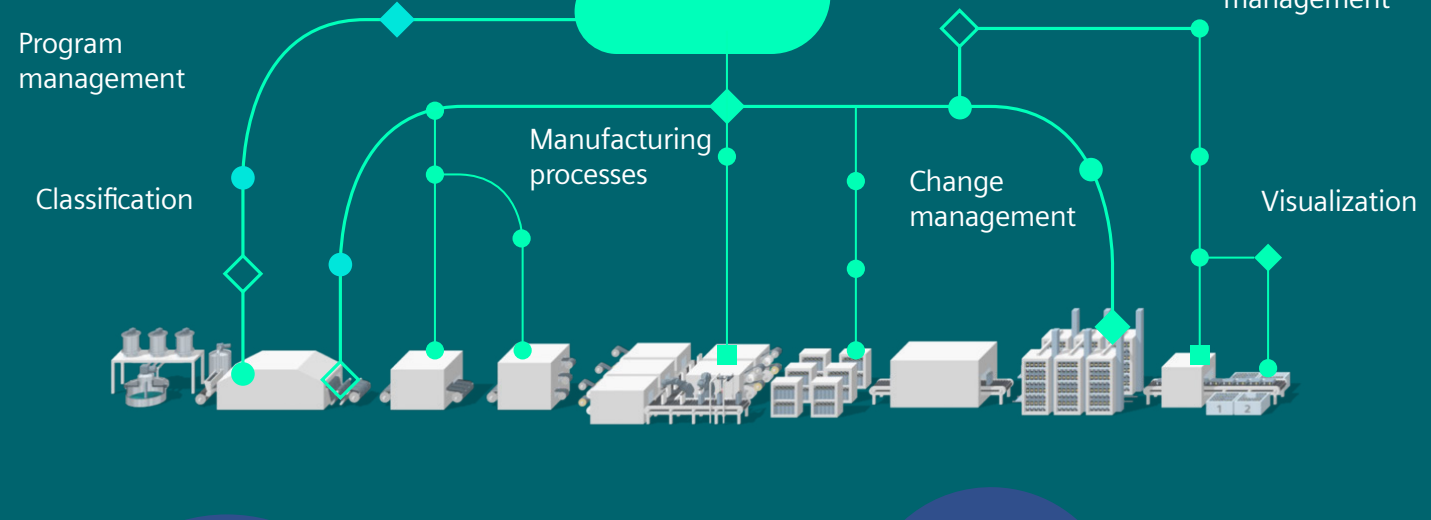

Product lifecycle management (PLM) helps you to manage your digital twin efficiently so you can bring innovative products to market, faster.

- Comprehensive battery digital twin
- Seamless collaboration
- Reduce extensive prototyping

PLM enables cross-domain design management

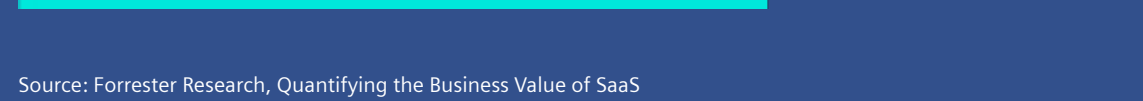

PLM capabilities streamline the product lifecycle

Accelerate battery development to secure your position as an industry leader with the flexibility of SaaS PLM

Top two reasons businesses choose SaaS:

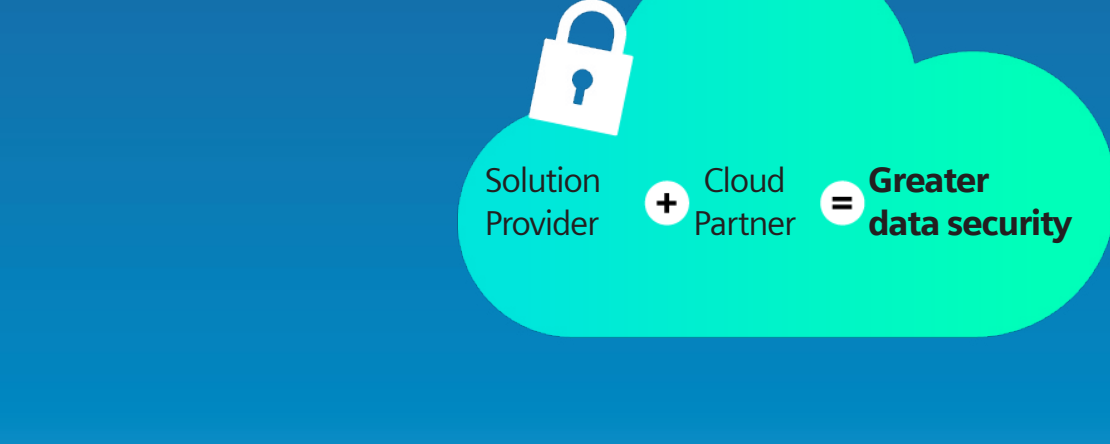

Source: Forrester Research, Quantifying the Business Value of SaaS

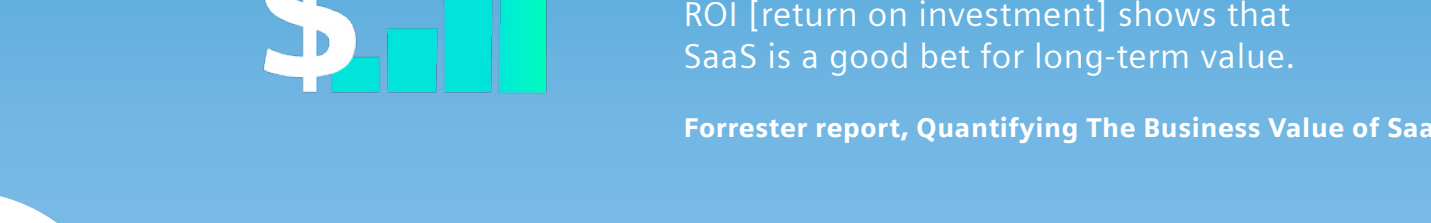

SaaS provides superior data security & protection

When a company uses a SaaS PLM solution, data security is the responsibility of the solution provider and its cloud partner...As a result, the likelihood of data theft and product development-crippling malware is much less than with on-premises PLM.
