

DIGITAL INDUSTRIES SOFTWARE

Deliver next-generation electronics faster with the power of cloud-based product lifecycle management (PLM) software

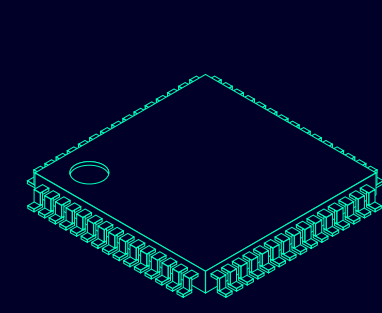

Market opportunities for electronics companies are expanding, but customers increasingly demand greater personalization, creating new challenges.

To compete today, companies need to:

Break down barriers to innovation

PLM software offers electronics manufacturers real-time visibility across domains, while breaking down silos and synchronizing systems to speed up delivery of next-generation products.

PLM investments could generate up to 50% higher returns if companies apply a sharper prioritization toward digitalization and pursue PLM programs as a means for true transformation.”

Why PLM?

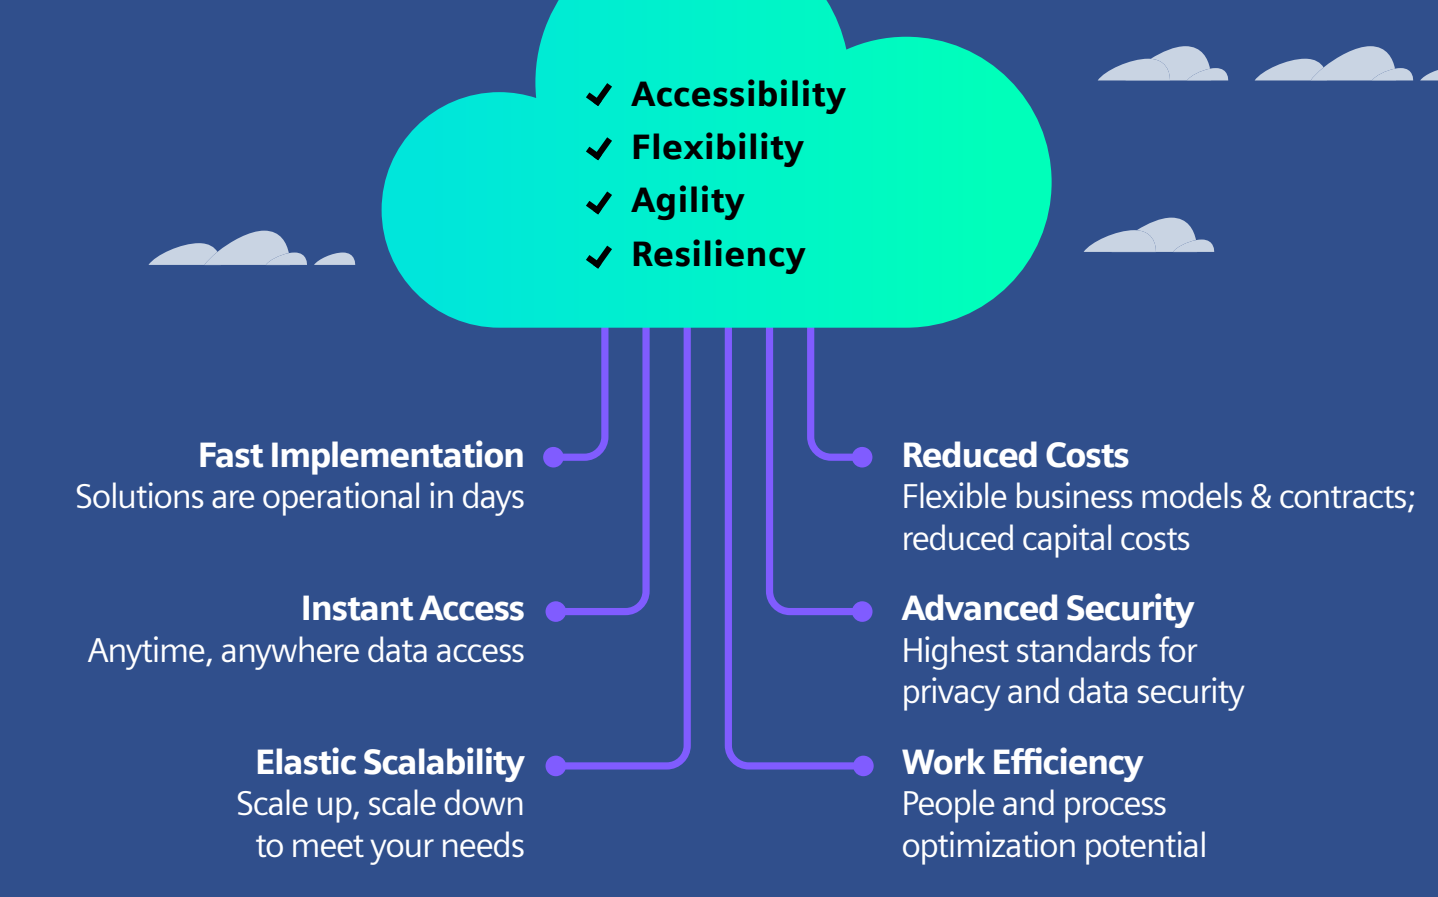

PLM helps you manage your digital twin efficiently so you can bring innovative products to market, faster.

PLM capabilities streamline the product lifecycle

Deliver electronics product and process innovation with the flexibility of SaaS PLM

Top two reasons businesses choose SaaS:

SaaS provides superior data security & protection

When a company uses a SaaS PLM solution, data security is the responsibility of the solution provider and its cloud partner...As a result, the likelihood of data theft and product development-crippling malware is much less than with on-premises PLM.
